The memory handbook
A practical guide to living with memory problems
About this handbook

This handbook is for people with mild memory problems. It contains information about memory problems and practical strategies on how to live well with them. Many of the ideas are suggestions from people who have problems with their memory. Others come from people supporting someone with memory problems or are based on research.

Memory loss can be difficult to cope with and frustrating. However, there are ways of managing the problems you’re facing. This handbook should give you some ideas to use or adapt. People have their own ways of helping their memory. What works for one person does not always work for another. Use the suggestions in this booklet to find what works for you. You may want to discuss some of the suggestions with friends and family.

If you have memory loss, you might also be having problems with things like organising, thinking clearly, concentrating, language or seeing things properly. Your symptoms may have resulted in a recent diagnosis of mild cognitive impairment (MCI) or dementia. You may not have a diagnosis at all, but might still be looking for ways to deal with memory problems.

If you would like to talk to someone, see your GP or contact Alzheimer’s Society. For information, advice and support, you can call the **National Dementia Helpline** on 0300 222 1122 or get in touch with a local Alzheimer’s Society service. Find your local service at [alzheimers.org.uk/dementiaconnect](http://alzheimers.org.uk/dementiaconnect)

You will also find lots of information about dementia on the Society’s website at [alzheimers.org.uk](http://alzheimers.org.uk)

For advice and support call the National Dementia Helpline on 0300 222 1122

Understanding your memory

This section looks at the different types of memory, how we use our senses and how memory works.
Types of memory

Memory is a very complex thing – there are several different types. You use these different types of memory when you do different things. It can help to know a little about them.

**Working memory**
You use this to store information for short periods. For example, working memory is needed to remember the numbers when you do a sum in your head.

If you have problems with your working memory you may take longer to figure something out. For example, you might need more time handling coins at the supermarket till.

**Episodic memory**
This is needed to recall past events – recent or distant. You use episodic memory when you remember personal experiences, such as what you had for lunch or when you attended a family gathering. These memories often include recalling emotions or feelings.

If you are struggling to recall recent memories such as where you parked the car, you may have a problem with your episodic memory.

**Semantic memory**
You use this to remember the meanings of words or remember facts. You also use it to remember familiar faces or objects.

If you have a problem with your semantic memory you may have difficulty finding the right words when you are talking to someone.
Prospective memory
You use this to remember about an appointment, date or event that is due to happen in the future.

If you have a problem with your prospective memory you may forget to do something at a particular time. Or you may forget that you had planned something, such as visiting a friend.

Procedural memory
This involves activities that you learn and can then do automatically without having to think. You use procedural memory to complete a sequence of actions in a particular order – such as tying shoelaces or swimming. You rely on it when you adopt new habits. This might include learning to use new memory aids – see page 17.

Using your senses
Your memory takes in information provided by your senses. Our five senses are:

Sight  Smell  Taste  Touch  Hearing
You can recall information stored in your memory with or without the help of prompts from your senses. However, a prompt can often help.

**Examples of prompts**

- A photograph of someone can prompt the memory of a forgotten name (**sight**).
- A particular perfume can prompt the memory of someone special to you (**smell**).
- The taste of a dish can prompt the memory of when you first ate it (**taste**).
- The feeling of sand under your toes may evoke memories of a childhood holiday (**touch**).
- A piece of music may bring back memories of when you first met your partner (**hearing**).

‘Try to live one day at a time and not worry what tomorrow will bring.’

Person with mild cognitive impairment (MCI)
The process of remembering

When you ‘record’ a memory, and then bring it back, your mind goes through this process:

Receiving
You get a piece of information that is received through your five senses.

Encoding
Your brain converts this information into a form that can be stored. It is held in your short-term memory first.

Storing
You transfer some of the information from short-term memory into the storage of long-term memory. This can take many months and can be helped by repeating it over and over again in your mind (known as ‘rehearsal’).

Retrieving
You recall the information stored in your long-term memory.

Memory problems can be caused by something going wrong at any of these stages. The way information is stored and retrieved can be very specific to the individual. It often depends on how important the information is to you.

Try tackling memory problems even if you sometimes find it difficult. There are ways to help improve your memory and you may already use your own techniques for remembering things.
Coping with memory problems

This section helps you to understand your difficulties with memory and looks at how you might feel about them. It also has suggestions for how to live well with memory problems.
Types of memory problems

Memory problems vary from person to person. What you consider to be a problem depends partly on what you need or expect to be able to do.

Some very common memory problems include:

■ forgetting people’s names
■ struggling to remember day-to-day events or experiences
■ misplacing items (such as keys or glasses) around the house
■ getting lost in a familiar place or on a familiar journey
■ finding it hard to start or follow conversations
■ forgetting appointments or important dates (such as birthdays)
■ struggling with the steps in a recipe.

Memory problems and your feelings

Everyone reacts differently to memory problems. It’s normal to get frustrated or worried, or lose self-confidence.

You may find the following tips helpful.

■ Talk to others, such as friends, family or other people experiencing memory problems. They might suggest helpful ways of thinking, and you may be able to find solutions together.
Coping with memory problems

- Do the things that you’re comfortable with.

- Focus on memory problems that are having a real impact on your life and that happen more often, such as regularly misplacing items like a mobile phone or keys.

- Try to focus on the things you can remember and can do. You may well have a good memory of events from many years ago. There will still be many things you are able to do that you learned in the past.

**Living with memory problems**

Many people find the following approaches helpful. It can help to try out different approaches and discover which ones work best for you.

Build on the skills you still have. For example, if you’ve always been an organiser and good at planning, make the most of this when facing new challenges.

**A regular routine**

Set up a regular daily routine. This will make it easier to remember what will happen over the course of the day. Include time to relax as part of the routine. But keep some variety and stimulation, such as meeting up with a friend or visiting a museum, so you don’t get bored.

**Talk about your day**

If you’ve been out for the day, talk to your partner, or a friend or family member afterwards about it. This is a good way of remembering and feeling positive about what you’ve done that day.
Plan ahead
Plan ahead to make your daily tasks more manageable. For example, put out the things you’ll need for the next day near the front door – but not somewhere you’ll trip over them! For example, you could put out a bag, your keys, and your wallet or purse. This will help you to remember these items the next morning.

One thing at a time
Try to do only one thing at a time. For example, if you’re making a cup of tea, don’t make a phone call at the same time. For a new task – like some of the memory strategies in section 4 – repeat it and give yourself time to learn it.

Small steps
Break tasks down into smaller steps. Then you can focus on just one step at a time. For example, if you’re wet-shaving or washing your hair, set out the things you need in order then put each one aside once you’ve used it. Ask for help from others if you think you need it.

One place for everything
Try to keep important things such as your keys, glasses and wallet in the same place. This could be a large bowl somewhere obvious and visible (for example, by the telephone, next to the fridge or on the coffee table). Then you can always find them easily.

Knowing where things are
Try to keep the layout of your home familiar so that you know where things are. Consider labelling drawers and cupboards with words or pictures of what’s inside them. Remove any clutter or unnecessary items.

For more information visit alzheimers.org.uk
Coping with memory problems

Distractions
If your environment is noisy or very busy, you will find it harder to remember things or concentrate. Your memory works much better with no distractions. Try to make your environment quiet and remove any unnecessary distractions.

Timing
Try to do the most challenging things early in the day, when you have most energy and can concentrate best. Avoid them if you feel tired, anxious or unwell. Take your time.

Support
Talk to friends and family about how you feel and how you can work together. They can support you to try out new techniques to help with your memory.

Don’t be too hard on yourself if you find something more difficult than you used to. You could take some time out and come back to it again later or think about different ways to manage the task.

Your next steps
If you have a diagnosis of dementia, find out more, including information about what treatments are available. Speak to your GP or see booklet 872, The dementia guide.

Talk to a family member or friend, or a professional such as a counsellor or psychotherapist, about how you’re feeling.
Memory aids and tools

This section suggests aids that might help with different types of memory problems.
Aids to help with memory problems

People with memory problems have suggested some of the following aids to help remember things. You might think of them as different tools for tackling different problems. You may have already used some of them.

Look for aids that fit with the skills you have. For example, if you have never used a mobile phone with a calendar, you may find it difficult to start using one now. Easy-to-use mobile phones – which can only be used for calls and nothing else – are available.

An occupational therapist (see page 53) can offer practical advice. For more expensive items, you might be able to ‘try before you buy’ – perhaps from a local disabilities living centre or independent living centre. Contact your local authority for details of your nearest centre, or see the Disabled Living Foundation in ‘Other useful organisations’. Whatever aids you use, people around you can support you to use them.

Daily living aids featured in this section are available from the Alzheimer’s Society online shop. Visit alzheimers.org.uk/shop
Traditional memory aids

Calendar or diary
Put a calendar, wallchart or noticeboard in a place where you will see it frequently – on the fridge or by the telephone, for example. You could use a whiteboard to note activities or tasks for the day and wipe them off as you do them.

A notebook or large ‘week to view’ diary can be helpful. You can write down things you want to remember, such as lists of things you need to do, or have done. Keep it somewhere easy to see, such as by the telephone or on a cupboard in the kitchen.

Get into a routine of checking a diary, calendar, noticeboard or whiteboard – perhaps when you wake up in the morning, every mealtime, or every time you make a drink.

Cross the day’s date off your calendar before you go to bed, so that you are certain about the date when you get up the next day.

Keep a journal
Write a few sentences or stick photos in a daily journal. You can look back in it to remind you what you have done or how you felt. A journal may also give you something to show others or to talk about. You could collect tokens or mementos of things you’ve done to add to the journal as reminders. For example, you could keep a receipt from a meal out, train tickets or a programme from a show.
Newspapers
Consider buying a newspaper each morning, or getting one delivered. That way you will always know what the day and date are. Tidy up and recycle old newspapers.

Calendar clock
You could use an automatic calendar clock. As well as showing the time, it will remind you of the date and day of the week.

Shopping list
Take a list when you go shopping. Cross things off as you put them into your basket. At home, keep a list of items that have run out so you can easily add them to your shopping list.

If you find it difficult to write, you could keep part of the packaging of items you’ve run out of. Or you could use a voice recorder or Dictaphone, to help remind you what you need to buy.

Contact numbers
Keep a list of important contact numbers by the phone – for example, the doctor, the police, utility companies, family members or your neighbours. See page 29 for a list of suggested contacts.

Leave your list by the phone or store the contacts in your mobile phone so that you have easy access to any professionals you might need to get in touch with.

You could consider buying a phone that allows you to pre-programme your most commonly used numbers into it. Then you would only need to press one number, or a button with a photo on it, to call someone. (This is sometimes known as ‘speed dial’).
Other memory aids

**Sticky notes**
You can use sticky notes anywhere in your home to remind you to do a one-off task.

For example, you could:
- stick one on the freezer to remind you to take something out to defrost
- stick one on your bookshelf to remind you when you have to return a library book.

Once you have completed the task, it’s important to throw the sticky note away. This way you won’t accidentally remind yourself to do something you’ve already done. It also helps you to keep things tidy.

**Permanent reminders**
You can make more permanent signs, for example a laminated A4 sheet, to remind you of things you need to do regularly.

For example, you could:
- stick a sign to the inside of the front door to remind you to take your keys, purse, wallet or a shopping list with you
- have a sign by the sink reminding you to wash your hands before cooking
- keep a sign near the bin reminding you what day to leave this out for collection.
Memory aids and tools

Medication reminder box
This is sometimes called a dosette box and has different compartments for each day and times of the day. The compartments have spaces for a number of different tablets. With a quick look, you can see whether you have taken your tablets for that day. Some models can be set to remind you when to take your pills, with an alarm, vibration or flashing light.

Your pharmacist can help you get a medication reminder box and put your tablets in the right compartments for you.

Colour codes
Try coding or labelling your keys so that each one is a different colour – you can buy coloured rubber key caps or rings for this. For example, your front door key could be red and your garage door could be green. If you live in a flat, the key to your building could be blue.

Electronic devices

There are a range of electronic devices that can be used to help with memory problems. Some of these are also known as ‘assistive technology’. Many people find that electronic devices can help with daily tasks and support them to remain independent.

Some devices will be easy to use, while others may take longer to get used to. You may need the support of friends, family or professionals to help you choose one and get the most out of it. There are benefits to using electronic devices once you’re comfortable with them.
Alarm clock
Use an alarm clock, a watch with an alarm, or a kitchen timer to remind you when you need to leave the house for an appointment, or when you have to check something cooking in the oven.

Write down why you have set the alarm, so you know why it is going off. Try to keep this reminder in a place that you’re likely to notice, such as a whiteboard, calendar or diary.

Mobile phone
There are different ways to use a mobile phone to help you:

- The display screen of most modern mobile phones shows you what day and date it is. You can also use the calendar function on your mobile phone to remind you of the day and date.

- You can programme reminders into most mobile phones. This means an alarm goes off at a certain time with a message reminding you about something you need to do. This could be a one-off event like meeting a friend for lunch, or something recurring like your favourite TV programme. (Some TVs or service providers, such as Freeview or Sky, also have reminder features so you can set a reminder to watch or record a programme).

- When you have booked a doctor’s or dentist’s appointment, for example, they may be able to send a text reminder to your mobile phone. Ask the receptionist about this when you book.
Memory aids and tools

■ Many mobile phones have a built-in voice recorder. Use this (or a portable recording device such as a Dictaphone) to record information that you need to remember. You could play it back later, or transfer reminders to a written calendar at the same time each day.

■ Many mobile phones have cameras. You could take a quick picture of something to remind you instead of having to write anything down.

**Computer or tablet device**

If you have a tablet device (such as an iPad) you can use functions such as reminders, notes or the calendar to help you.

Most email accounts have calendar and ‘to do’ list features that you can check when you use your computer.

You might need to put a sticky note or label on your computer to remind you to turn it on and check your daily list.

‘The best advice is treat each day as it dawns. Don’t try and second guess how you think you will be, just be the best you can be on that day!’

Person with dementia
Apps

If you have a smartphone or tablet device there are a range of applications (known as ‘apps’) that you might find useful.

These include:
- calendars
- reminders
- maps
- apps for life story work (a personal record of experiences, people and places in your life)
- apps for relaxation exercises and mindfulness – a technique that can help people manage their mental health or simply gain more enjoyment from life.

You can download apps from the internet (via a ‘store’ such as the App Store or Google Play) and use them for specific tasks. For example, you could use a medication reminder app to prompt you to take your pills, and which medicine to take. Some apps will be free, while you will need to pay for others.

There are lots of different apps available and you may want to try different ones to see if they work for you. Some apps have a ‘basic’ free version which you can try before buying the full app.
**Prompt and reminder devices**
These are devices that detect movement nearby and can be placed near a door. You can set the device to play a voice message as a prompt for your memory when you approach. For example, it could go near your front door, to remind you to lock up when you go out, or to take your keys with you. Or you could have one near the kitchen door to remind you to check you have switched the oven off.

Another kind of reminder device automatically plays a pre-set message at a certain time. For example, if you go shopping at 9.30am on a Tuesday, you can record a message reminding you to take your shopping list and bags with you at this time.

**Locator devices**
You can use these to help you find frequently mislaid items such as keys or a wallet. You attach a small electronic tag to the item. If you mislay it, you click a button on the locator device to make the tag beep. You will need to keep the locator device somewhere obvious (see ‘One place for everything’ on page 14). Your friends and family may also find these useful.

---

**Your next steps**

- Look into the different kinds of memory aids that are available and see if any might work for you.
- Talk to friends and family about which aids you might use. Plan together how you’re going to use the aid and ask for their help.
A list of useful contacts

Make a list of contacts and keep it near your phone, so that you have easy access to any professionals you might need to get in touch with. Your list could include, for example:

- doctor/GP surgery
- community/district nurse
- memory service or community mental health team
- social services
- care agency
- chemist/pharmacy
- dentist
- optician
- occupational therapist
- dementia adviser or dementia support worker
- others (including important personal contacts).
There are many different strategies you could try to help you cope with memory problems. Some of these strategies involve picturing things in your mind and some use words and rhymes.
People remember things in different ways. This means some strategies will work better for some people. Try them out and see which ones work best for you. This may also change over time.

A problem-solving approach

When applying strategies for remembering things, you might find it helpful to follow these steps:

1. **Identify the problem**
   **Example:** ‘I sometimes forget people’s names.’

2. **Decide how much it matters to you**
   **Example:** ‘It happens a lot. It can be embarrassing.’
   (It may be that some things matter a great deal, like forgetting a close friend’s name. But will it really matter much if you forget the name of a celebrity who you’re unlikely to meet?)

3. **Think about how you might help yourself**
   **Example:** ‘I could carry a small photo album with people’s names next to their photos or save them as contacts with photos in my mobile phone. Or I could tell people I’m a bit forgetful, ask for their name, and then repeat it in conversation.’
   (Other examples are given on the following pages).

4. **Practise your strategies and see what works for you**
   Rehearse your strategies with a close friend or partner. They can support you to learn. You will then feel more confident when you go out.
Using mental pictures

Learning new things
Some people can picture things and places in their mind to learn and remember:
- facts
- how to do something new
- how to do routine actions.

For example: How can you remember a PIN so that you can get money from a cash machine? Imagine the numbers making a letter or shape on the number pad: 1789

Remembering someone’s name
You could try making a picture in your mind from something in the person’s name. For example:

- for Natasha Singh, you could imagine a girl singing
- for Neil Holly, you could imagine a man kneeling down and waving a piece of holly.

You can have a lot of fun with these kinds of reminders. The more funny or unusual they are, the more likely you are to remember them.
You could link the person’s most prominent feature with your mental picture of them. Glasses, long curly hair, or something they often wear (such as a particular hat or jumper) could be good things to focus on.

You could also try linking the person with other people who have the same name – for example, ‘This person has the same name as my favourite film star, Charlie.’

For help with remembering names and other details of health professionals who visit you, you could use Alzheimer’s Society publication 923, My visitors book.

Helpful tips:

■ When picturing images in your mind, try to be in the place where you are most likely to have to remember it.

■ Practise using the image. It will help you learn and remember it.

■ Describe or draw your images in a notebook. This will help you to remember them and you will have something to refer to if you forget some of them.

■ Tell someone else the strategies you’re using. If you can’t remember which technique this is or how to use it, they can prompt you.
Jogging your memory
Try the following suggestions to jog your memory in different situations:

<table>
<thead>
<tr>
<th>Situation</th>
<th>Strategy for jogging your memory</th>
</tr>
</thead>
<tbody>
<tr>
<td>Losing something at home.</td>
<td>Try picturing yourself when you used it last and visualise where you put it down.</td>
</tr>
<tr>
<td>Going into a room and being unable to remember why you went there.</td>
<td>Try to picture where you were when you decided to go to the room. Re-tracing your footsteps mentally (or physically) can help you to recover your train of thought.</td>
</tr>
<tr>
<td>Preparing food and being unable to remember the ingredients you need for a particular dish.</td>
<td>Try picturing yourself cooking it and using all the ingredients that you need. Going through the alphabet can help you remember names of different ingredients.</td>
</tr>
</tbody>
</table>
Using words and rhymes

Words and rhymes can also help you to remember people’s names.

Try thinking of words that start with the same letter as the person’s name:

- Pleasant Peter  Pretty Penny
- Funny Fiona  Smiley Sunita

You could also think of words that rhyme with the person’s name:

- Tall Paul  Jolly Molly
- Merry Terry  Carer Sarah

Some people make up their own rhymes, songs or sayings to help them remember facts and numbers. Here are some techniques people told us they use:

- Betty found it difficult to remember the registration number of her car, which was Y288 FHT.

She made up this humorous sentence:

Why (have I got) 288 Fat Hairy Toes?
You might be able to think of a word where the initials stand for a set of actions you have to remember.

When Jean arrived home, she had to open the front door, switch off the alarm and then press a ‘zapper’ to close the electric garage door. She found it difficult to remember the zapper, so the garage door was often left open.

Jean hung a DAZ washing powder packet by her front door to remind her of the procedure.

Harry always forgot to close the front gate when he got home. He made up the word GLO to help him remember:

It can help if you picture yourself carrying out the sequence of actions in your head.
A joke or funny phrase might also help you to remember. For example:

Jean **DAZZLED** herself every time she zapped the garage door!

Harry felt a **GLO** of pride as he remembered to lock the gate!

Use any reminder that works for you – it doesn’t matter how odd it may seem to someone else.

---

**Your next steps**

- Try some of these approaches for coping with memory loss.
- See if other people can help you with some of these strategies.
Staying healthy

Looking after your health will help with your memory day-to-day and in the long run.
Problems can seem worse if you are stressed, worried or ill. If you can keep physically, mentally and socially active it will help you maintain memory, skills and self-confidence.

To stay healthy it is important to think about physical health, mental health, and your social life and activities.

**Physical health**

- Eat regular balanced meals.
- Eat slowly. Allow yourself at least half an hour for each meal.
- Try to drink at least two litres (six to eight medium glasses) of fluid every day.
- Try to eat at least five portions of fruit and vegetables every day. A portion is what fits in your cupped hand.
- If you smoke, try to give up, and drink alcohol in moderation (if at all). Your GP surgery will be able to give you support and advice about healthy levels of alcohol and about stopping smoking.
- Try to do some exercise at least five days a week, for 30 minutes or more each time. A brisk walk, swimming, cycling or pushing a lawnmower all count.
- Consider joining a local exercise group or class such as a walking group, tai chi, aerobics or yoga. Visit your library, speak to your GP or local Age UK to see what is available where you live (see ‘Other useful organisations’).
Mental health

Keep your brain active
Keeping your brain active may help you retain your memory and other mental abilities for longer. Could you learn a new hobby? There are lots of ways to exercise your mind, including:
- reading
- keeping a diary
- doing puzzles or quizzes
- playing card games or board games.

Find ways to deal with stress and worry
It’s common for people to become worried when their memory lets them down. This makes it even harder to remember a person’s name or what you were doing. The following tips may help you to manage stress or worry:

- Talking about problems can help. Try sharing your problems with someone you trust. They will welcome your trust and you may feel better just for taking some action. Friends or family may suggest solutions you hadn’t thought about.

‘A sense of humour really helps. Laughter really is the best medicine.’

Person with mild cognitive impairment (MCI)
Relax

It is important to be able to relax. See the suggestions in ‘How to relax and reduce stress’ below.

How to relax and reduce stress

There are many different exercises and techniques you can practise to help you relax and reduce stress. Here are some of the more popular ones.

You can sometimes combine these. Try some to see what works for you.

- **Diaphragmatic or belly breathing** – where you sit or lie down with one hand on your chest and one on your belly. You breathe in and out smoothly, slowly and deeply. Your belly (rather than your chest) rises and falls as you breathe.

- **Mindful breathing** – where you sit with your eyes closed and just focus on breathing in and out, and how this feels. When your mind wanders, you bring your focus back to your breathing.

- **Progressive muscle relaxation** – where you lie down and then tense, hold and relax different muscle groups in your body, in turn (hands, arms, neck etc).
- **Guided imagery** – where you visualise yourself being somewhere safe and restful, and imagine experiencing all the sights, sounds and smells.

- **Listening to relaxing music (or sounds such as waves)** – you can get a relaxation CD from your library, a shop or online. You can also download relaxation music to a mobile phone or tablet (such as an iPad).

You will need instructions to learn most of these exercises. Ask at the doctor’s, look online (for example NHS Choices) or visit your local library or bookshop (often in the ‘wellbeing’ or ‘self help’ section). You can get specific apps for your mobile phone or tablet device to help with relaxation or try searching for videos online.

If you have a diagnosis of dementia you can find more information on how you can live well with the condition in booklet 872, The dementia guide.
Staying socially active

■ Keep seeing friends and family even if memory problems leave you feeling less confident.

■ Try to get out and about if you can, and talk to people.

■ Find out if there is a local dementia café or memory café you can attend. Ask at your local Alzheimer’s Society or search at alzheimers.org.uk/dementiaconnect

■ If you go to a place of worship, community group or activity, continue to attend this regularly.

■ Consider volunteering. It can help you to stay socially and physically active and it can be good for physical and mental health. Find out more at alzheimers.org.uk/volunteer

Everyday activities

■ Try to manage your time so you can get everything done. It can help to do the most important things first and come back to other things later.

■ Give yourself time for hobbies – for example, reading, singing, swimming or meeting friends.

■ Try keeping a ‘wish list’ of things that you would like to do, such as a trip to the cinema, theatre, football match or a local place of interest. Try to make sure that you do something from your wish list once a week to help maintain a sense of wellbeing.
**Sleep and sleep routines**

Sleep is essential to good physical and mental health and wellbeing. Sleep also plays an important role in memory and learning. Research suggests that sleep helps you to store new memories in the brain over time. Sleep can also help with ‘cognitive’ processes (for example, thinking and problem-solving).

There are many reasons why you might have trouble getting to sleep or find that your sleep pattern varies. If you have trouble sleeping, the following suggestions may help.

- Set the alarm for the same time every morning and get up when it goes off. Do this whether or not you feel you have had a good night’s sleep. It will help your body to develop a regular sleep pattern.

- Being more active and going outside during daylight can help. See ‘Physical health’ on page 42 for more information.

- Avoid long daytime naps. If you do need one, keep it to 30 minutes at most and no later in the day than early afternoon.

- Avoid tea, coffee, cola and cocoa from lunchtime onwards. These are stimulants and can keep you awake. Try caffeine-free varieties.

- Avoid eating a heavy meal or drinking too much fluid in the evening. Digesting a meal can keep you awake, or you might wake up to go to the toilet.

- Don’t drink alcohol before going to bed.
Try not to do anything that needs a lot of physical or mental energy – such as going for a run or Sudoku – during the hour before you go to bed. Your body and mind will still be awake when you go to bed.

Wait until you are sleepy before you lie down to go to sleep. Make sure the room is at a comfortable temperature and not too bright.

Keep your bedroom just for sleeping or sex. Don’t use electronic devices, such as the television, radio, phone or tablet device, in the bedroom. Try not to eat or read in bed.

When you go to bed, turn the light off.

If you don’t fall asleep within about 10 minutes, get up and go to another room if it’s safe to do this. You may wish to use a night-light. Do something relaxing in the other room and only go back to bed when you feel sleepy. You may find that you have to do this more than once a night.

‘I volunteer at the local Alzheimer’s Society, and hopefully this helps to keep my brain working. Just because we have memory problems doesn’t mean we can’t help other people in some way.’

Person with mild cognitive impairment (MCI)
Your next steps

Find ways to be physically, mentally and socially active, and keep an eye on your diet and alcohol intake.

Try to get enough sleep and if you are having problems, talk to your GP.
You do not have to face memory difficulties on your own. There are lots of people who can support you and help you to stay active and independent. They might be friends, family or professionals. Help is available and it’s OK to ask for it.
Family and friends

Remember that the memory loss is not your fault. Work with those around you to solve problems and cope better with memory problems. Ask them to read through this handbook with you.

Family and friends can support you by:

- talking about how you are feeling
- helping you identify and achieve the things that are important to you
- reinforcing approaches and strategies you are trying
- supporting you to do things, not doing them all for you – for example, reminding you about the calendar clock if you ask ‘What day is it?’, rather than just telling you the day.
- not ‘testing’ you – for example, by asking you, ‘Do you remember who this is?’
- being sensitive and supportive if they need to repeat any information they have already told you.
Professionals

Many professionals can help you live well with memory difficulties. If you have a diagnosis of mild cognitive impairment or dementia, you may already be familiar with some of these. Ask your GP if you think you need to see one of them, especially if memory problems are affecting your daily life.

**Occupational therapists** can work with you to help you with daily life and personal care. They can support you to continue to carry out daily activities that are important to you. An occupational therapist can give advice on memory aids and coping strategies.

**Psychologists** can help you with depression or anxiety and adjusting to loss or life-changing events. This can include helping you come to terms with memory loss or a diagnosis of dementia. Talking to a trained professional may help you feel less stressed or unhappy. Psychologists can also help you to develop coping strategies for memory problems.

**Speech and language therapists** can help you and your relatives communicate better if you are having difficulty using or understanding words. They can also help you with memory aids and strategies that use language.

Your local Alzheimer’s Society can help put you in touch with dementia advisers, dementia support workers, dementia cafés and support groups. They will all give helpful practical advice.

Find out more at [alzheimers.org.uk/dementiacommunicate](http://alzheimers.org.uk/dementiacommunicate) or by calling the [National Dementia Helpline](tel:0300 222 1122) on 0300 222 1122.
Speak to your local pharmacist or a disability living centre if you need help to remember to take your drugs. They may have equipment to help you with this. You should be able to try things out and maybe even borrow some items for a while.

**Structured approaches**
There are some structured approaches to help with memory loss and dementia. Ask professionals whether these are available in your area. Your GP, local Alzheimer’s Society staff, memory service or community mental health team can help.

**Cognitive rehabilitation**
In cognitive rehabilitation, a professional such as a psychologist, occupational therapist or speech and language therapist will work with you and someone close to you to help you achieve an agreed goal. It works by getting you to use the parts of your brain that are working to help the parts that are not.

Memory difficulties can impact on daily life in various ways and there are different things that you may want to change to make your life more enjoyable. This could be learning to use a mobile phone or re-learning a life skill such as cooking. You could change or adapt your environment to make coping with memory loss easier. Cognitive rehabilitation can help you to meet your goals and cope better with memory problems. It can also help you to think about the skills, abilities and knowledge you still have.
Cognitive stimulation therapy
Cognitive stimulation therapy (CST) aims to improve your mental abilities by keeping your brain active. This is done through a series of themed activity sessions carried out over several weeks. One session, for example, might involve doing word puzzles or talking about current affairs. Then in another session you could be playing an instrument along to music. CST also includes elements of reminiscence (see below).

After the first set of sessions, you may be offered maintenance CST (less frequent ‘top-up’ sessions) to keep the benefits going. There is evidence that approaches such as CST improve mental abilities and quality of life for people with dementia.

Life story work and reminiscence
Life story work is where you use a scrapbook, photo album or app on your mobile phone or tablet to remember and record details of your life. This could be your experiences, values or beliefs. Life story work is usually a joint activity for you and a family member, friend or support worker.

Reminiscence involves talking about things from your past, using prompts such as photos, familiar objects or music. It can help you see your life as a whole and recognise your experiences and achievements.
Sometimes these approaches are combined using a memory box of favourite possessions or memorabilia. Many people find techniques like this helpful because they draw on your earlier memories, which you tend to retain for longer.

By talking about who you are, it can help you and others to focus on yourself as someone with an interesting and varied life who still has skills and interests, rather than on your memory problems.

**Your next steps**

- **Consider creating a record of the important things in your life.** You can record memories of experiences, people and places in a book, photo album, or app.

- **Talk to family and friends about strategies you can use to help with your memory problems.**

- **Speak to a professional about strategies and techniques that may help you.**
Alzheimer’s Society services

National information and support services
These are available wherever you live in England, Wales and Northern Ireland.

National Dementia Helpline – 0300 222 1122
The Helpline is for anyone who is affected by dementia or worried about their memory. Trained advisers provide information, support, guidance and signposting to other appropriate organisations. The Helpline is open 9am–8pm Monday–Wednesday, 9am–5pm Thursday and Friday, and 10am–4pm Saturday and Sunday. You can also contact the Helpline by email at helpline@alzheimers.org.uk

Talking Point online community
Talking Point is our online community for people with dementia, their carers, family and friends. It’s a place where people can ask questions, share experiences and get information and practical tips on living with dementia. Being connected with other people going through a similar experience means no one feels alone when living with dementia. Talking Point is available 24 hours a day. Go to alzheimers.org.uk/talkingpoint

Dementia Services Directory
The Dementia Services Directory is our comprehensive, easy to use online support services directory for anyone affected by dementia in England, Wales and Northern Ireland. Through a simple postcode or place name search, you can find voluntary, statutory and private care and support services that are close and relevant to you. Each listing includes clear, essential information about the support service on offer. Go to alzheimers.org.uk/dementiaconnect
Information
Alzheimer’s Society produces a wide range of information for people with dementia, carers, family and friends.

This includes the publications listed in this handbook. You can read this information at alzheimers.org.uk/publications

To request printed copies, go to the order form on our website or phone 0300 303 5933.

LPA digital assistance service
Alzheimer’s Society offers a Lasting power of attorney digital assistance service to help people with dementia create and register LPAs online. If you don’t have access to the internet, or are not confident using a computer and have no one who can help, we will complete the forms on your behalf. Call the Alzheimer’s Society National Dementia Helpline on 0300 222 1122.

Local services
Alzheimer’s Society provides a range of local services in England, Wales and Northern Ireland. Dementia advisers and dementia support workers provide personalised information, signposting, practical guidance and emotional support for people with dementia and their families. Side by Side is an Alzheimer’s Society service that links people with dementia to volunteers so they can keep doing the things they love. For more information go to alzheimers.org.uk/get-support/your-support-services/side-by-side

Alzheimer’s Society also supports groups such as Singing for the Brain®, peer support for people with dementia, and information and support groups for carers. The services that are available can vary from place to place. Contact your local Alzheimer’s Society office or the National Dementia Helpline on 0300 222 1122 for more information about Society services in your area or visit alzheimers.org.uk/dementiaconnect

For more information visit alzheimers.org.uk
Other useful organisations

There are lots of other organisations that can offer help and support with the issues covered in this guide. Some of these are listed below.

AcTo Dementia
www.actodementia.com

Provides recommendations and guidance on accessible touchscreen apps for people living with dementia.

Age UK
0800 055 6112 (advice line, 8am–7pm everyday)
www.ageuk.org.uk

Age Cymru (Wales)
0800 022 3444 (advice line, 9am–5pm weekdays)
www.ageuk.org.uk/cymru

Age NI
0808 808 7575 (8am–7pm everyday)
www.ageuk.org.uk/northern-ireland

Age UK, Age Cymru and Age NI provide information and advice to help people know their rights and make the best choices for later life.

For advice and support call the National Dementia Helpline on 0300 222 1122
AT Dementia
0115 748 4220
www.atdementia.org.uk

AT Dementia works to promote high-quality care and services for people with dementia through consultancy, project work, education and information and advice on assistive technologies.

British Association for Counselling and Psychotherapy (BACP)
01455 883300
bacp@bacp.co.uk
www.bacp.co.uk

BACP represents counsellors and psychotherapists. Can provide a list of counsellors and psychotherapists in your area.

British Psychological Society
0116 254 9568
enquiries@bps.org.uk
www.bps.org.uk

The British Psychological Society provides access to a list of clinical and counselling psychologists who offer private therapy services.

Royal College of Occupational Therapists
020 7357 6480
www.rcot.co.uk

The Royal College of Occupational Therapists provides details of independent occupational therapists in your local area.
Disabled Living Foundation
0300 999 0004 (helpline, 10am–4pm Tuesday–Thursday)
helpline@dlf.org.uk
www.dlf.org.uk

The Disabled Living Foundation provides impartial advice, information and training on independent living. The organisation has a library of simple electronic aids which people in England can borrow for two weeks to try out.

Royal College of Speech and Language Therapists
020 7378 1200
info@rcslt.org
www.rcslt.org

The Royal College of Speech and Language Therapists is the professional body for speech and language therapists in the UK. It provides information about speech and language therapy.
Acknowledgements

Alzheimer’s Society would like to thank the organisations below for their endorsement of this publication:

**British Psychological Society:** A learned society and the representative body for psychology and psychologists in the UK. The Society and its members develop, promote and apply psychology for the public good. BPS enhances the efficiency and usefulness of psychologists by setting high standards of professional education and knowledge.

**Royal College of Occupational Therapists:** The professional body for occupational therapists in the UK, representing members in local, national and international arenas, and supporting professional development in research and practice.

**Royal College of Speech and Language Therapists:** The professional body for speech and language therapists in the UK, providing leadership and setting professional standards. It facilitates research, promotes better education and training of speech and language therapists, and provides information for our members and the public.
We consulted a large number of people with memory problems, including dementia, in the process of updating *The memory handbook*. For their invaluable input, advice and suggestions, we would like to thank the members of the following groups:

- Dementia Activities Review Team (DART) (Peterborough)
- Food for Thought (Slough)
- Ladies Healthy Memories (Peterborough)
- Ladies’ Activity Group (Peterborough)
- Open Minds (Peterborough)
- The 3 Es (Worcester)
- The 3 Ts (Portsmouth)
- Thinking Allowed (Bristol)

**Reviewers**

**Dr Tamsin Fryer**, Principal Clinical Psychologist, Devon Partnership NHS Trust and Faculty for the Psychology of Older People, British Psychological Society

**Caroline Hampson**, Specialist Occupational Therapist in Dementia Care, East Lancashire Memory Services, Lancashire Care NHS Foundation Trust and Doctoral Researcher, University of Cumbria

**Dr Colin Barnes**, Lead Speech and Language Therapist, Specialist in Older Persons’ Mental Health, Solent NHS Trust, Portsmouth
This handbook has been reviewed by people affected by memory problems. We would like to thank them for their generous and valued contributions.

It can be downloaded from our website at alzheimers.org.uk/memoryhandbook
